

MODULE 5 – DELETE ACL and Final Verification

Complete CRUD access verification

ServiceNow Lab – Script-Controlled ACL

Objective

- Add DELETE permission using bb4 and verify the complete READ, CREATE, WRITE and DELETE ACL flow.

DELETE ACL

- Navigate to System Security → Access Control (ACL).
- Click New.
- Type: record
- Operation: delete
- Name: u_institution_details
- Active: true
- Add bb4 under Requires role.
- No data condition is required for this DELETE ACL.
- Click Submit/Save.

Final Verification

- Use a user with bb1, bb2, bb3 and bb4.
- READ: Verify access to records permitted by the READ ACL.
- CREATE: Verify the New button is available and a record can be created.
- WRITE: Edit an accessible record and save changes.
- DELETE: Verify the delete action is available for an accessible record.
- Use a user without the required roles to confirm denied operations.
- Use Admin to verify administrative access.

Permission Summary

Operation	Required role	Purpose
Read	bb1	Read records allowed by READ ACL
Create	bb2	Create new records
Write	bb3	Edit existing records
Delete	bb4	Delete existing records

Outcome

- This lab demonstrates how ServiceNow ACLs combine roles, conditions and scripts to protect records and control CRUD operations across lists and forms.
